

Lead Free Paints from Kansai Nerolac

Kansai Nerolac Paints Ltd. has always been committed to the welfare of society and environment and as a responsible corporate has always taken initiatives in the areas of health, education, community development and environment preservation.

Kansai Nerolac has worked on removing hazardous heavy metals from their paints. The hazardous heavy metals like lead, mercury, chromium, arsenic and antimony can have adverse effects on humans. Lead in paints especially poses danger to human health where it can cause damage to Central Nervous System, kidney and reproductive system. Children are more prone to lead poisoning leading to lower intelligence levels and memory loss.

Kansai Nerolac has removed heavy metals from the passenger cars products long ago. This was taken forward for decorative range of products and gradually all such heavy metals were removed. At present, the entire Decorative Range of products which are used in Households has become lead free by design. Kansai Nerolac does not add any lead or other such heavy metals in its manufacturing process. However, lead contamination may take place through ingredients like solvents and thinners. But in any case the same will be lower than limits certified by various organizations and also considered safe from health norms.

To educate the consumers on the same we have also started an advertising campaign highlighting the adverse effects of lead on humans and how Nerolac Paints are made safe by removal of these hazardous heavy metals.

To identify eco-friendly products, we have introduced lead free logo which is displayed on all the decorative products of the company.
