

Water Management Policy

Water management is the primary focus at Kansai Nerolac Paints Limited, and we consistently endeavor to ensure efficient water use, mitigate risks associated with water scarcity or pollution, and align our operations with legal standards.

The purpose of this policy is to establish sustainable and structured approach to water management by focusing on sustainability, efficiency and stakeholder involvement at organization level while supporting operational goals, regulatory compliances, and social responsibility.

To fulfil our objectives, encompassing environmentally conscious development, we shall:

- Develop system for measuring, monitoring, and evaluating water consumption.
- Reduce water wastage and maximize efficiency by focusing on recycle and reuse of water and establish measurable targets to continuously improve water efficiency.
- Ensure compliance with all applicable laws and regulations.
- Adopt water-efficient technologies and processes across KNPL to optimize water usage and implement measures to avoid water loss in water distribution infrastructure/network.
- Optimize the quantity and quality of our wastewater by using effective recycle and reuse process.
- Prioritize the usage of alternate water sources to avoid groundwater usage in water-stressed regions.
- Adopt rainwater harvesting strategies at all locations to promote sustainability and conserve water resources. Maintain Water Positive status by adopting a circular approach to water management
- Provide clean and safe drinking water for all employees and implement water, sanitation and hygiene (WASH) standards.
- Inculcate and promote sustainable water practices.

The top management team of KNPL will review this policy once in three years, however depending on business requirement, it can be modified as and when need arises. The policy is available to the interested parties, as appropriate.
